Subject: Feedback on cooperation with GIS Point

From the end of 2022, the GIS POINT company is one of our cooperating partners within the project focused on mobile mapping.

GIS Point participates in the evaluation of 3D data from mobile mapping – laser point cloud and panoramic photos. After they have been trained at the very beginning of the cooperation, the results are submitted on their part in the required quality and time.

The representatives of GIS Point are able to respond operatively and solve any requirements that arise in a very short time. If something needs to be resolved, they have no problem with it and get to work quickly every time.

They are always willing to accept an invitation to meet, clarify any ambiguities and return to any problem areas until the problems are resolved.

We find the communication with their project manager at a very good level, just as we find the GIS Point company to be a very good and reliable partner.
