**Review for:**

**GISpoint**

Sadova street, 2a/1  
Lviv  
Ukraine

We started to consider cooperation with GISpoint at time of full workload. We were looking for digital spatial data processor capable to work with the latest software tools.

Due to time pressure and lack of people on the job market we contacted based on recommendation the company GISpoint from Ukraine.

The start of the cooperation with GISpoint was scheduled for April 2023. The initial negotiations went smoothly. Ievgen Lavrishko communicated helpfully on behalf of GISpoint.

The cooperation concerned a large contract with time pressure for completion. Especially it involved work in the specialized Panorama Editor software, evaluation of vector drawings based on complex input data - MMS (mobile mapping system), aerial photography and other formats.

The cooperation went according to our expectations with great results. Communication was in English without any major problems.

In GISpoint we found a reliable partner who met not only our expectations, but also came up with their own suggestions how to solve situations in domain of communication as well as technical ones. First of all, we should highlight the skills of project manager Alevtyna Kostyanchuk during the contract discussions.

I believe that GISpoint will be a serious partner for anyone looking for cooperation in the field of GIS/geomatics.
